Local demo configuration

This reference describes the synthetic local order-service demo.

LLM_ENABLED=false disables model analysis.

PROMETHEUS_URL selects the configured metrics server.

Actuator collection uses a configured service and environment target.

Configuration values describe setup. They do not establish
the cause of an incident or prove that a source was collected.

Evidence interpretation limits

Actuator snapshots describe the current observed state.

A cumulative HTTP 504 counter is not a window error count.

Successful scrape evaluations do not prove business health.

Documentation provides interpretation guidance.
Claims about an incident require telemetry evidence.
